fancylobster@kranz.finance

Abstract

KRZ Token is an ERC-20 and BEP-20 token contract that is covering the cost for, and rewarding, businesses to start accepting cryptocurrency. With its Integration Fund, Kranz purchases any necessary technology (like a new tablet/computer) and/or covers the cost of any software development (like website integration) to make accepting cryptocurrency easier. Kranz has a Reward Fund with token allocations specifically set aside for businesses that cooperate with them and start accepting cryptocurrency.

There is a state-of-the-art exchange that is under development and it will be using Kranz Token as an Automated Market Maker Token and also as a Reward Token that will be rewarding businesses proportionally on every transaction for accepting cryptocurrency.

Since Kranz Token has a burn function on every transaction, the supply will become increasingly scarce over time, especially after full implementation on the exchange. The exchange will be completely covering the arbitrage and volatility for businesses so that they can accept cryptocurrency and just have the \$USD that they need deposited directly into their business bank account.

Introduction

“Why have a reward for businesses to accept Cryptocurrency?” Because the more businesses that start accepting Cryptocurrency, the more valuable Cryptocurrency becomes for us as a society. If Cryptocurrency *does not* continue to become more widely adopted, it could remain in its niche alternative market. If Cryptocurrency *does* become more widely accepted, we will see enormous growth in the market, as well as a revolution in the technical standards and expectations for transactions across the world.

“Why would a business want to partner with Kranz for their reward system?” Companies that don't already accept any kind of Cryptocurrency will have to make a decision: Do they start accepting Crypto now, get Kranz rewards (including NFTs), and get assistance setting up a payment system, OR do they just wait for the inevitable integration later, with no early access to Kranz token.

It is believed that accepting Cryptocurrency is *inevitable* for businesses looking for a way to increase revenue and reduce costs by improving the efficiency, invoicing, and/or reliability from not involving multiple unnecessary third parties in their transactions. Kranz will be able to make this transition for companies easier and accelerate the acceptance of Cryptocurrency everywhere.

The Problems

There is latency for mass adoption/acceptance of Cryptocurrencies. The technology is here, the coins are here, and the options are available and abundant. Even for older projects, Ethereum 2.0 and The Lightning Network will help keep BTC, LTC, and ETH relevant in the discussion for what Cryptocurrency will be the standard.

There remains a bit of a disconnect between older/well established companies and the Cryptocurrency realm. The amount of businesses that currently accept Cryptocurrency are few and far between. There are multiple reasons why this is the case:

1. Business owners may want to keep things simple by only accepting USD.
 - a. They don't understand Cryptocurrency and the technology seems too complicated.
 - b. Their employees expect to receive USD for payment.
 - c. Most things people pay for (taxes, food, bills, product development, etc...) requires USD.
2. Business owners may believe that they could lose money by accepting Cryptocurrency because, .
 - a. The prices of many Cryptocurrencies are extremely volatile.
 - b. They take unnecessary losses from transaction fees.
3. Business owners may not want to integrate Cryptocurrency into their Point of Sales.
 - a. The process may be confusing and potentially overwhelming.
 - b. They may see it as an unnecessary amenity and not worth their investment.
4. Business owners may not understand that Cryptocurrency is here to stay.
 - a. They may see it as a trend or a gimmick that may fade away eventually.

Kranz Exchange Benefits

Buyer and Seller

The Buyer can spend any Cryptocurrency.

The Seller can receive any Cryptocurrency or US Dollar at guaranteed asking price.

Seller

All conversion costs and fees are covered by the Exchange.

All volatility and arbitrage changes are covered by the Exchange.

General User

Wide variety of available and compatible tokens to trade (including ETH to BNB pair).

Simple and easy-to-use interface.

Kranz General Tokenomics

Total Supply: 2,000,000,000,000 (Two Trillion)

Having such a large total supply has become a recent trend with meme tokens. It is only necessary for Kranz to have such a large supply for easier notation of the high volume of transactions.

Liquidity: Locked for 4 Years

By locking the token for 4 years it allows Kranz enough time to fill enough liquidity on its own and to integrate with as many businesses as possible.

No Public Presale or ICO

Kranz Token will remain as decentralized as possible.

ERC-20 Contract Address: 0xf54b304e2e4b28c7e46619d1a340f9b2b72383d7

[Token Contract has already been audited and any issues were resolved before launch]

Kranz Token features a Multi-Phase tax system with the taxes going towards:

Integration Fund Wallet: Multi-Sig Contract wallet that will specifically fund the necessary cost of a business integrating Cryptocurrency into their financial system.

Business Reward Wallet: Multi-Sig Contract wallet that will fund the tokens to reward businesses for accepting Cryptocurrency.

Burn: A small percentage of every transaction will have the tokens burned and gone forever: making Kranz have a deflationary supply.

Liquidity: Tokens sent for liquidity will ensure that the token is always tradable, at least, on decentralized exchanges.

Kranz UniTrade Bridge Information

Users can swap KRZ between BSC and ETH network while utilizing the backend technology that UniTrade provides on its native bridge service.

Users will find that the BSC token contract has the ability to mint new tokens. This is the UniTrade Bridge service working as intended. Explained below:

There are two trillion KRZ tokens on the Ethereum blockchain. The amount of total BEP-20 tokens in circulation will always have the equivalent amount of ERC-20 tokens locked in a contract wallet on the Ethereum blockchain.

In total circulation, there are only ever two trillion tokens including both ETH and BSC.

When using the bridge from BSC to ERC, the tokens on BSC are burned and then the ERC tokens are unlocked.

When using the bridge from ERC to BSC, the tokens on ERC are locked and then new BSC tokens are minted to replace the locked ones.

Launch Information

1. UniTrade deployed the ERC-20 and BEP-20 Contracts and sent the total supply to the initial LP wallet.
2. 40% of the total supply of KRZ and 51.733 ETH were put into Uniswap V2 for an ETH/KRZ pairing. 1% of the KRZ was taxed from the transaction, so the liquidity pool started with 51.733 ETH and 792,000,000,000 KRZ.
<https://etherscan.io/tx/0x65b1bb43406a19f0d8de1c2d28d6bb7e84eef1a18fb75c2081754b7f79fc249b>
3. The Uniswap V2 LP tokens were then locked for four years.
<https://app.unicrypt.network/amm/uni-v2/pair/0x718e7c6022255fc9b7c6a43d0c00c8dca193321d>
4. 10% of the total supply was then sent across the UniTrade bridge to convert into BEP-20 tokens.
5. These BEP-20 KRZ tokens and 90 BNB were put into Pancakeswap V2 for a BNB/KRZ pairing. 1% of the Kranz was taxed from the transaction, so the liquidity pool started with 90 BNB and 194,059,800,009.70299 KRZ.
<https://bscscan.com/tx/0x75a714a596cabe8d1e3fc9cade21aac44ef2b94c02a4f09a4743a214be3b1d6a>
6. The Pancakeswap V2 LP tokens were then locked for four years.
<https://app.unicrypt.network/amm/pancake-v2/pair/0xa60a154bf401dA9fDe04c4D1f7477e676D7a71B5>
7. 20% of the total supply was then sent to the Business Reward Multi-Signature Wallet.
8. 5% of the total supply was then sent to the Integration Multi-Signature Wallet.
9. 4% of the total supply was then sent to the Exchange Listing Reserve Multi-Signature Wallet.
10. About 20% of the total supply was then sent out to the people who helped fund liquidity. This was not a presale and the liquidity providers did not get their ETH-equivalent amount of KRZ tokens. They put forth a considerable amount of Ethereum and have provided enough liquidity for Kranz Token to thrive. Team tokens are distributed for many purposes and here are a few examples of their potential uses: pay for legal fees to patent and protect proprietary information for Kranz, help pay for exchange listings, help pay for the exchange development, help pay for marketing, and help make their money back.
11. There were roughly 20 billion KRZ tokens left. Half was sent to the wallet for website development and the other half was sent to the Exchange Listing Reserve Multi-Signature Wallet.
12. Zero KRZ tokens remain in the deployment wallet.

Integration Fund

ETH Integration Fund Address:

0x15ea005500905fb1feb480661c57b155f82685a6

BSC Integration Fund Address:

0xF2A993014E320Ceac01eA835D0cBd5e01Ca887C6

The cost of accepting Cryptocurrency payments may vary from business to business. Some businesses may already have the technology necessary and simply just do not have access to a Cryptocurrency exchange or payment infrastructure like Kranz. Other businesses may not be so lucky to already have the necessary technology: like a tablet or portable computer that would make accepting Cryptocurrency far easier.

The Integration Fund will cover the cost of the necessary materials and man hours required to streamline the acceptance of Cryptocurrency at their place of business. In order for a customer to pay in Cryptocurrency using the Kranz Business Exchange, it would be most effective for the customer to be able to scan a QR code for a receiving address directly from the screen of a computer or any device that has a cryptocurrency exchange account running live.

5% of all Integration Fund purchases will go towards buying Froge Finance, see Kranz Charity Efforts on page 30 for more details. To increase Kranz Token's exposure and to find more businesses to accept cryptocurrency payments, 12% of the Integration Fund can be used to cover marketing costs, never to exceed 100B KRZ Tokens: the original allocation for the fund.

The next two pages will briefly lay out examples for the most common use cases of the

Integration Fund:

Integration Fund Example A

Situation:

Company A (small, family-operated restaurant) would love to accept Cryptocurrency, but they only have one POS and the hardware is only optimized for the employee use of their POS software. This computer has only one monitor behind the counter and it is in a permanently fixed position facing the employee.

Problem:

The customers would have a difficult time putting their phone behind the counter (because the POS computer monitor is in a fixed position behind the counter) in order to send their Cryptocurrency or the employee would have to handle the customer's phone (which is not sanitary). Regardless of that situation, the computer also may not have the capability to efficiently run the business's POS software and the Kranz Business Exchange simultaneously.

Solution:

Upon inspection of Business A's situation, the Kranz Crew may deem it necessary to upgrade the components of the computer, upgrade the monitor to have a swiveling function, or to buy a new device or computer altogether.

Integration Fund Example B

Situation:

Company B (online-oriented company) would love to accept Cryptocurrency. They have a large volume of visitors on their site and they do not want to redirect too much of their traffic during the transaction process.

Problem:

Company B wants to incorporate Kranz into their website in some way, but they would have to pay developers in order to adjust their site.

Solution:

Upon inspection of Business B's situation, the Kranz Crew may deem it necessary to fairly compensate the developers of Business B's website or, upon insistence of Business B, to hire out other developers to finalize the process.

Kranz Business Rewards

ETH Reward Wallet Address:

0x0d3Ba746fB74baFafDeB443301C602665d43907e

BSC Reward Wallet Address:

0x76496B2F535248667F553c1B15CE822c9C65F456

Kranz Token focuses on providing incentive for businesses to start accepting Cryptocurrency because we believe that this is where the real and tangible value of Cryptocurrency will come into play.

For every transaction fee, a small portion will be sent to the Kranz Business Reward wallet. This wallet will fund two scenarios that will help push for mass adoption:

During Phase 1:

Businesses that commit to working with Kranz for Phase 2 will receive an allocation of Kranz tokens from the Kranz Business Reward wallet.

See Kranz Phase 1 Business Partnerships

During Phase 2:

Kranz Business accounts that receive Cryptocurrency payments will be awarded proportionally with a specified amount of Kranz.

See Kranz Phase 2 Business Partnerships

Kranz Phase 1 Ecosystem Overview

Kranz Token

An ERC20 Token that will at least be used as a reward token on the Kranz Business Exchange.

Kranz.Finance (Website)

Where to stay up to date on all the latest Kranz news and announcements.
Progress updates will be found here.

The Kranz Crew

The core team responsible for moving the project along, having the conversations with businesses, and providing the community with updates.

Kranz Token Phase 1 Tokenomics

1% Fee Per Transaction on the Ethereum Contract

50% Burned.

10% Sent to the Business Reward Wallet.

30% Sent to the Integration Fund Wallet.

10% Sent to the Liquidity Wallet.

3% Fee Per “Sells” Only on Decentralized Exchange(s):

[UniSwap](<https://app.uniswap.org/>) (ETH)

[Pancakeswap](<https://pancakeswap.finance/>) (BSC)

50% Burned.

10% Sent to the Business Reward Wallet.

30% Sent to the Integration Fund Wallet.

10% Sent to the Liquidity Wallet.

Kranz Phase 1 Business Partnerships

The Kranz crew will make the following agreements with businesses:

Business Agrees to:

1. Start accepting Cryptocurrency payments (at least a stable coin like USDT).
2. Advertise in some way that they are now accepting Cryptocurrency payments.
3. Cooperate with Kranz for Phase 2.

Kranz Agrees to:

1. Allocate a specified amount of Kranz Token for their business.
2. Assist in the process of the business starting to accept Cryptocurrency.
3. Advertise the partnership and that the business is now accepting Cryptocurrency.

Kranz Phase 2 Ecosystem Overview

Kranz Exchange for Businesses

Full exchange launch with a focus on providing seamless adoption of Cryptocurrency for businesses. Businesses will have no fees for any conversions or transfers.

Kranz Exchange for General Users/Traders

The User Interface will be as simple and easy-to-use as possible. The exchange will have liquidity for many conversions and token pairs that have not previously been easily accessible.

Kranz Token

ERC20 Token and short Tokenomics discussion here. May be used as an AMM token. Some tax of the transactions will change from being sent to Integration and Liquidity, to being sent to the burn wallet.

Kranz Token Phase 2 Tokenomics

1% Fee Per Transaction on the Ethereum Contract

*60% Burned.

*20% Sent to the Business Reward Wallet.

*20% Sent to the Integration Fund Wallet.

3% Fee Per “Sells” Only on Decentralized Exchange(s):

[UniSwap](<https://app.uniswap.org/>) (ETH)

[Pancakeswap](<https://pancakeswap.finance/>) (BSC)

*60% Burned.

*20% Sent to the Business Reward Wallet.

*20% Sent to the Integration Fund Wallet.

****Phase 2 Tokenomics Still Subject to Change***

Kranz Business Exchange Transaction Options

Automatic Option A:

Businesses accept any cryptocurrency and the US Dollar is deposited directly into their business bank account.

Standby Option A:

Business accepts any cryptocurrency and the US Dollar amount remains on the Kranz exchange.

Option B:

Business accepts any cryptocurrency and the business directs all incoming payments to be converted into a Cryptocurrency of their choice (BTC, ETH, LTC, USDT, etc...).

Option C:

Business accepts any cryptocurrency and it is not converted from its original form. Like all other options, Kranz still maintains an invoice of the transaction.

The next four pages will briefly lay out examples for all of the above transaction options:

Kranz Business Exchange *Automatic* Option A Example Transaction

1. The Seller provides the Buyer with the ETH Receiving Address on the Kranz Business Exchange for the exact USD amount of the sale.

2. The Buyer sends ETH.

3. The exact amount of USD from the sale is deposited from the Kranz exchange and directly into the Seller's business bank account.

Kranz Business Exchange *Standby* Option A Example Transaction

1. The Seller provides the Buyer with the ETH Receiving Address on the Kranz Business Exchange for the exact USD amount of the sale.

2. The Buyer sends ETH.

3. The exact amount of USD from the sale is deposited into the Kranz Account of the Business. The Business can decide to hold the USD here in order to make further Cryptocurrency investments or to transfer the money into their bank account at their own leisure.

Kranz Business Exchange Option B Example Transaction

1. The Seller provides the Buyer with the ETH Receiving Address on the Kranz Business Exchange for the exact USD amount of the sale.

2. The Buyer sends ETH.

3. The ETH is directly converted to a designated coin or divided and then converted into multiple tokens. The Business may decide that they want their Cryptocurrency sales to all be converted to Bitcoin or they may decide that they want their Cryptocurrency sales to all be converted into a unique profile: e.g. 60% Bitcoin, 20% Ethereum, and 20% Litecoin.

Kranz Business Exchange Option C Example Transaction

1. The Seller provides the Buyer with the ETH Receiving Address on the Kranz Business Exchange for the exact USD amount of the sale.

2. The Buyer sends ETH.

3. The ETH is deposited into the Kranz Account of the Business.

Kranz Phase 2 Business Partnerships

Businesses partnered from Phase 1 will have full early access to the Business side of the Kranz exchange. Businesses that were not partnered with Kranz during Phase 1 will still have an opportunity to apply for a Business Exchange account. However, any additional costs of a Business integrating payments outside of Phase 1 may or may not be covered by the Kranz Integration Fund Wallet.

Kranz Business accounts that have partnered from Phase 1 will receive a specified amount of Kranz in proportion to the incoming transaction that the Business receives from a sale.

For Example (Exact amounts of the Kranz reward calculation has not been finalized):

Business Z Receives 1 ETH from a buyer in exchange for a computer.

Kranz Exchange will reward Business Z with 5 Kranz for accepting Cryptocurrency.

Kranz will work on providing all of the necessary infrastructure in order to streamline the sales operations of the Businesses. Some may have more specific needs than others. For instance, some Businesses may just use their Kranz account solely for the arbitrage compensation of the Automatic Conversion process. Other Businesses may find it useful to have a Kranz page that includes a digital shop that is tailored for their exact products.

The following page will feature an example of a shop's listing. The user interface is not finalized and this is simply an example of what will be possible with Kranz:

Kranz Business Exchange Unique Shop Example

2018 Tesla Model X P100D

Mileage: 32,306

\$85,977USD

Select Your Payment Token From Below:

Ethereum (ETH) 

Amount of ETH required:

33.351

Update in 4:23

0x751c1e74d3c1fcd7a24f93f540bf8823029f99b8

Kranz Exchange for General Users

The Kranz Exchange for General Users will focus on the following:

1. **Simplicity** and a User Interface that is extremely **easy** to use, especially for people who are new to the Cryptocurrency ecosystem.
2. **Versatility** and **diverse compatibility** between all tokens available on the exchange.
3. **Abundance** of tokens available on the exchange.

Potential Partnerships with Traditional Banks

Kranz loves banks.

The Kranz Exchange will strive to work in harmony with banks in order to streamline transactions for Businesses and investors alike.

The Kranz Exchange would focus on pursuing the following opportunities:

A traditional bank may cooperate with the Kranz Exchange to expedite the KYC (Know-Your-Customer) and verification processes.

A traditional bank may earn interest on staking USD on the Kranz Exchange through offering something similar to a CD (Certificate of Deposit) with their customers.

A traditional bank may integrate an interface on their website for their users to interact with the Kranz Exchange for their USD holding amounts and/or the ability to at least view their other holdings.

A traditional bank may be eligible to receive Kranz rewards.

Potential Partnerships with Existing Exchanges

Kranz loves existing exchanges.

The Kranz Exchange is looking for a symbiotic relationship with existing exchanges in order to maintain sufficient liquidity of holdings for all of its tokens.

The Kranz Exchange would focus on pursuing the following opportunities:

An existing exchange may cooperate with the Kranz Exchange to expedite the KYC (Know-Your-Customer) and verification processes.

An existing exchange may integrate an interface on their website for their users to interact with the Kranz Exchange to transfer their holdings back and forth.

An existing exchange may earn staking rewards for holdings that their users stake towards the Kranz Exchange.

An existing exchange may be eligible to receive Kranz rewards.

Kranz Charity Efforts

Froge Climate Partnership Program (FCPP)

Kranz Token will be partnering with Froge Finance in order to make Kranz, and its subsequent exchange, environmentally-friendly projects.

How does Froge work?

The FROGE smart contract automatically deposits a portion of every transaction to the *Cool Earth* climate charity to support our world's rainforests.

What does Cool Earth do?

“*Cool Earth* shares the most effective conservation methods around the world and invests in those with the potential for best outcomes for people and rainforest. We work with communities who want to protect their forest. From setting up an in-country team to working directly with communities and local NGOs to develop their capacity, our partnerships are community-led and adaptable to each location.”

Why a Kranz and Froge partnership?

Froge makes it easy to make consistent contributions towards helping keep our Earth a habitable environment. Kranz is working towards making sure that you can buy anything with any Cryptocurrency. An ideal future for Froge, Kranz, and humanity means that a portion of every transaction you need to have for all daily payments (food, beverages, bills, taxes, etc...) could go towards protecting our environment.

For more information on Froge Finance, please visit: <https://frogefinance.com/>

For more information on Cool Earth, please visit: <https://www.coolearth.org/>

Roadmap:

Phase 1:

{

1. Finalize ERC-20 and BEP-20 Contracts with an ETH/BSC Bridge.
2. Complete Whitepaper, Graphic Design, Website, and Social Media.
3. Launch ERC-20 and BEP-20 Tokens.
4. Continue onboarding 200 total Businesses for Phase 1 Partnerships.
5. Finish constructing the Kranz Exchange for Businesses and General Users.

}

Phase 2:

{

1. Launch Kranz Exchange for Businesses and General Users.
2. Switch Kranz Token to Phase 2 Tokenomics.
3. Commission NFT artwork for Phase 1 Business Partners.
4. Help businesses integrate Cryptocurrency payments, even if they completely missed out on the reward program.

}
